Chapter 1 Product overview

1.1 Package list

Please check carefully if all listed items are included in the package as below:

1. IP-Camera
2. Quick Installation Guide
3. Mounting Bracket set
4. RJ45 Cable
5. Power Adapter

Please strictly follow the input voltage power of the adapter required, or it will damage the device and this situation does not belong to the range of warranty. After purchase, if any accessories mentioned above is missing or damaged, contact the place of purchase immediately.

1.2 System Requirement

1. CPU: 2.0GHz or above (recommend 3.0GHz)
2. RAM: 256MB or above (recommend 1.0GB)
3. Graphic card: 64MHz or above
4. OS: Windows 7, Vista, XP, Mac OS, Windows 8
5. Internet Explorer 6.0 or above, or compatible browser, Firefox etc.
6. Android 2.3 or above
7. IOS 4.3 or above

1.3 Introduction

Tenda super easy IP Camera provides a professional home or small business surveillance Solution. Through our mobile phone APPS “CloudNeteye” and PC software “CloudNeteyeForPC” users can remote view directly, without DDNS domain name or setting any Port mapping on Router.

1.4 Features

1. **HD plus IRCUT(HD series):** 720p HD Video Quality, you can get rich detail and crisp image quality. With IRCUT to ensure that the images are real color.

2. Plug and Play: Based on P2P cloud Technology, no need to configure the wireless Router and DDNS, then you can view immediately, so easy.

3. Remote Viewing: User P2P APP you can remote view through the iPhone, Android phone, PC.

4. H.264 Video Compression: H.264 video compression technology, need the minimum bandwidth network traffic while high image quality, more suitable for smartphone viewing.

5. Night Vision: This device can work well during the day, with infrared LED, it can also work at the night, round-the-clock surveillance.

6. Wi-Fi Connect: Use WiFi, camera easily connect to a wireless Router. You can easily get rid of the trouble of deployment the Ethernet cable.

7. Micro SD/TF storage: You can store image and video on your Micro SD/TF card.

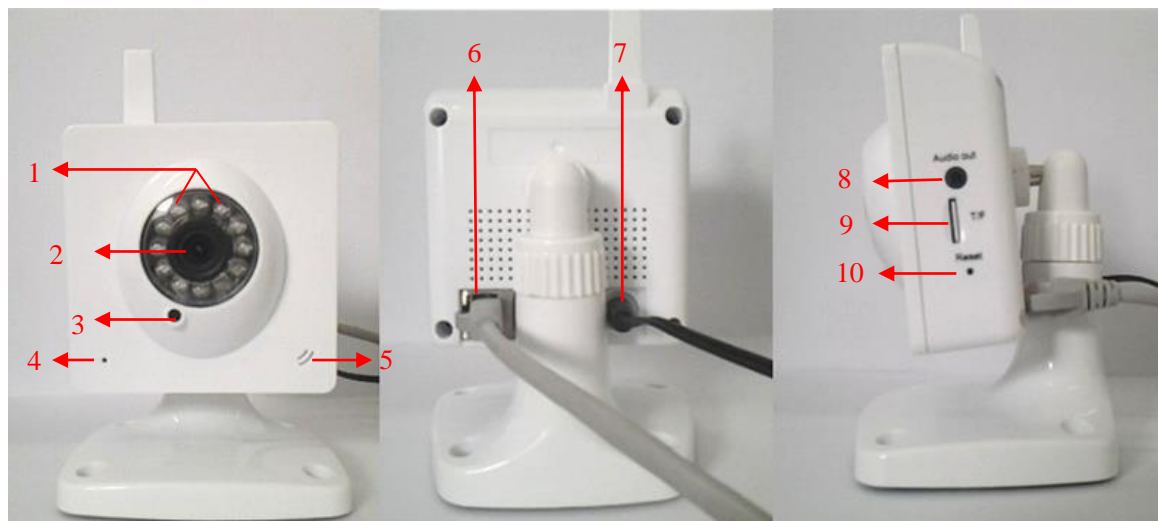

8. Motion detection and alarm: If you need to monitor a certain area, when an exception occurs in the region, trigger an alarm automatically, send alarm information by e-mail, FTP. (Note: communication need to connect external audio.

9. Two-way audio: Not just screen monitor, you can also voice intercom. When you find the abnormal situation, you can be reminded by voice intercom, to ensure safety. (The speak function need additional audio to support)

10. Wide angle lens: 1080P HD lens, 120 degree, $f=2.8\text{mm}$, $F=2.0$, support IRCUT

11. Support ONVIF

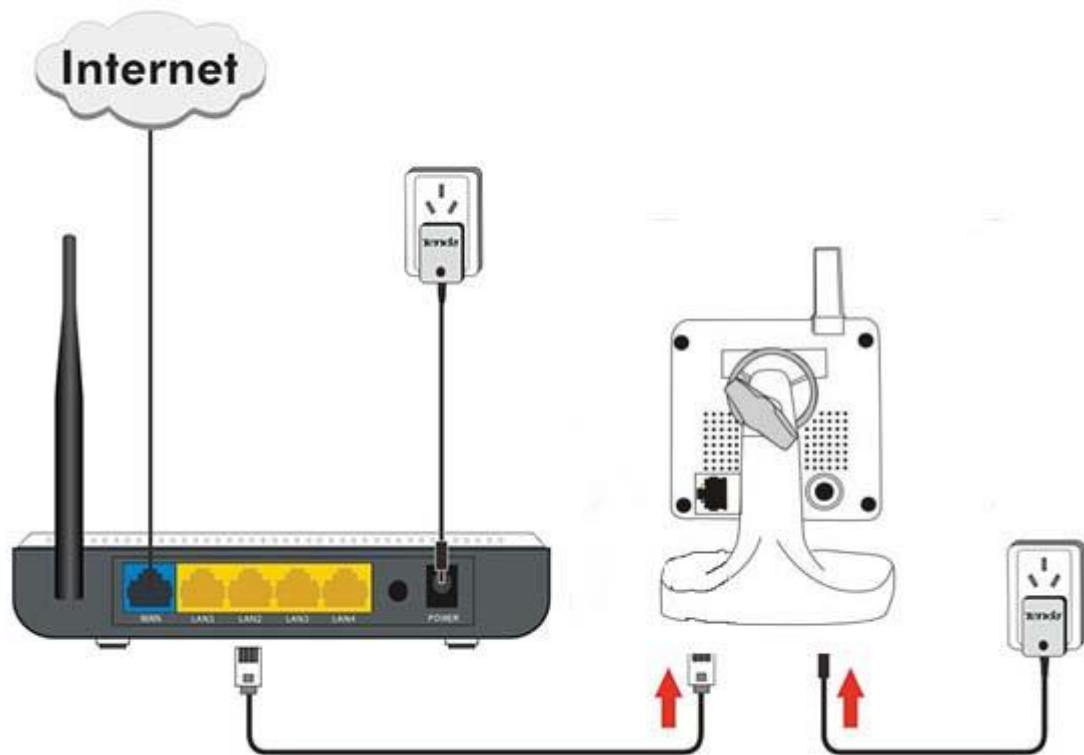

1.5 Hardware overview

1. IR LED
2. Lens
3. Photodiode
4. Indicator LED
5. MIC
6. RJ45
7. Power
8. Audio out
9. T/F: TF Card Slot
10. Reset

Chapter 2 Installation

2.1 Desktop Installation

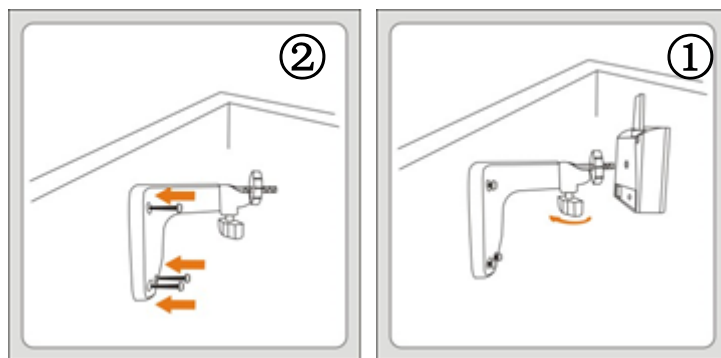

1. Take out the camera.
2. Connect the included power adapter to the camera.
3. Then connect Ethernet cable between the camera and LAN port on your Router.

Please ensure the DHCP function of your Router is enable.

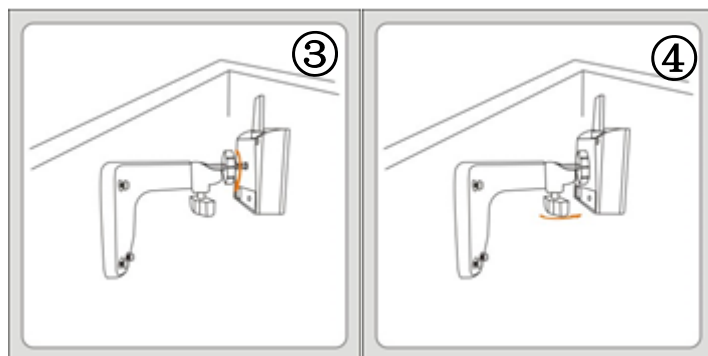

2.2 Wall install

According to your needs, refer to the figure to install.

① : Take out the bracket, and fix it by the screws.

② : Turn the spindle on the bracket to be loosen.

③ : Camera connect to bracket, turn the collar on the bracket clockwise to tighten it

④ : Adjust the camera to the location you needed, turn the spindle and fix it.

Chapter 3 Smartphone View and Install

3.1 “CloudNeteye” download and install

You can choose the following way to download and install "CloudNeteye".

3.1.1 iPhone

Search “CloudNeteye” in “APP Store”, download and install.

3.1.2 Android smartphone

Search the " CloudNeteye" from “Google play”,download and install. If you do not have “Google play” in smartphone, please downloand and install it at first.

3.2 Add IP Camera

As following, we will introduce how to add IP camera based on different operating systems IOS and Android.

3.2.1 IOS

1. Run “CloudNeteye” APP on your iPhone.

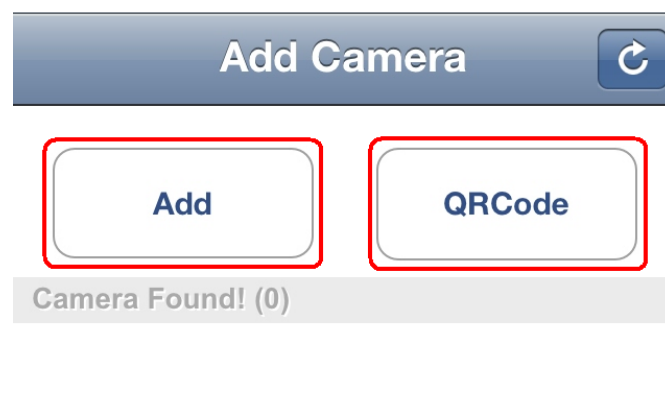

2. You can choose one of following way A. B. C, to add camera.

A: If your iPhone and IP camera is connected to the same Router, “CloudNeteye” will search the IP Camera automatically, and appear in the following screen.

You just need to click the camera UID Number , input password "admin "; then click "Save" to finish add camera.

For some reason if your iPhone can't find camera automatically, pls click “Add” or “QRCode” as the following screen.

B: Recommend to scan QR code to add camera. Click “QRCode”, and scan the UID QR code at the bottom of the camera; input password “admin”; click “Save” to finish add camera.

C: Also, you can click “Add” to input camera UID number manually. (UID number is 20 alphanumeric below the UID QR code). Then input password “admin”, click “Save” to finish add

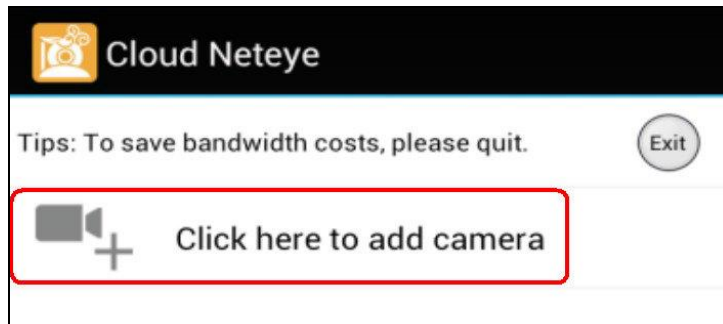

camera

Note: Because the UID number is case sensitive, please input the correct font format.

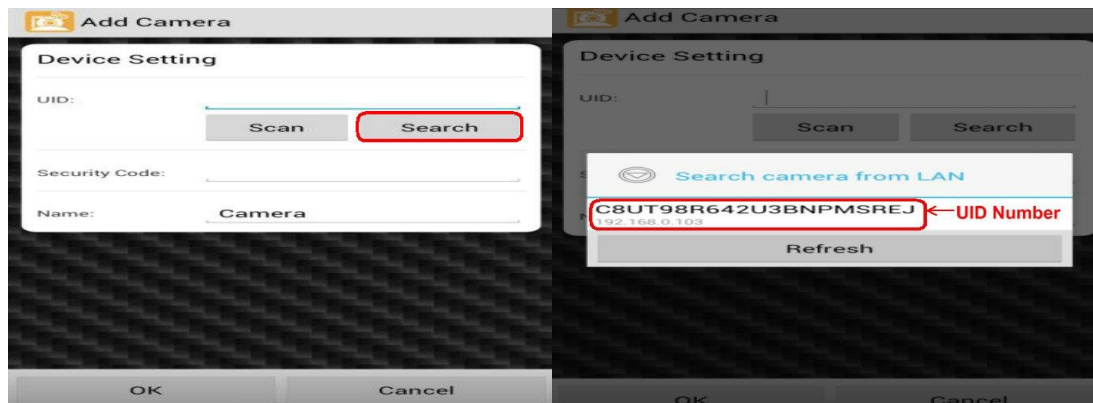

3.2.2 Android

1. Run “CloudNeteye” on your smartphone.
2. Touch “Click here to add camera” in the following screen.

3. You can choose one of following way A. B. C, to add camera.

A: If your smartphone and IP Camera is connected to the same Router, click “Search” to add camera, as show in the following screen. Touch the UID number, then input password “admin”, click “OK” to finish add camera.

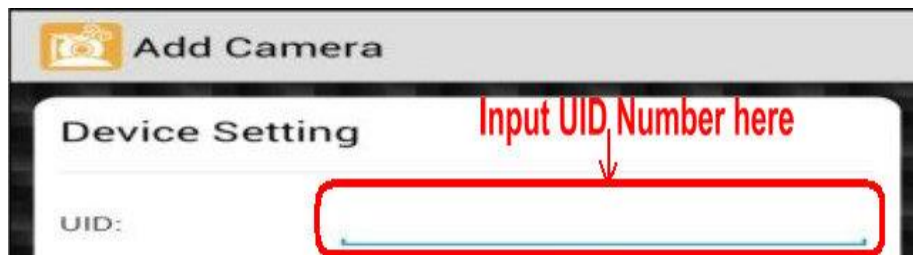

For some reason if your smartphone can't find camera automatically, pls click “Scan” to add.

B: Scan the UID QR code at the bottom of the camera, input password “admin” , Click “OK” to finish add camera.

C: Input UID number manually as show in the following picture; then input password" admin " ,

click “OK” to finish add camera. (UID number is 20 alphanumeric below the UID QR code)

Note: Because the UID number is case sensitive, please input the correct font format.

3.3 CloudNeteye Live View

After finish add IP camera(camera shows on line), you can view video, snapshot, mute,listen and speak etc.

3.4 IP Camera setting and management

3.4.1 Android smartphone

Select device and hold on 3 seconds or click “” button near the device to do parameters settings. User can set reconnect, edit camera, view snapshot and remove camera.

3.4.1.1 Modify Camera

Enter “Edit Camera” to do two settings as below:

1. Device Setting
2. Advanced Setting

Advanced Set

- a. Can modify the camera's password
- b. Can adjust common video parameters: video quality, video flip, video mirror, Environment mode
- c. WiFi setting

Click “Manage Wi-Fi networks” to enter searched wireless list, and then you can select usable wireless network.

d. Even Setting

1. Motion detection: If this function OFF, then the camera don't send motion detection alarm. If choose Low\Medium\High\Max means motion detection function ON. When sensitivity higher, then the camera trigger alarm more easily; default area is full screen.
 2. Notification: There is 4 alarm modes, Silent, Tones only, Vibrate only, Ringtone and Vibrate.
- e. Recording Setting: There is 3 options, Off, Full time, Alarm. If choose “Off”, camera stop recording; if choose “Full time”, camera record all day; if choose “Alarm”, camera start recording after motion detection (need device's motion detection ON, and insert MicroSD/TF card).
- f. Format SDCard: click this button, format MicroSD/TF card (need camera with memory card, otherwise without this button)
- g. Device Information: Display Model, Version, Vender, Total size, Free size.

3.4.2.1 View Event

Click View Event, can check full time recording and motion detection recording.

3.4.2 iPhone

Click “” button beside the camera list, can do parameter settings and reconnect camera. User can view event, add camera, view info.

3.4.2.1 Modify camera

- a. Security Code: can change the camera password
- b. Video setting: can adjust common video parameters: Video quality, video flip, video mirror, Environment mode

- c. WiFi: Click **WiFi** to enter searched wireless list, and then you can select usable wireless network.
- d. Motion Detection: If this function OFF, camera can't send motion detection alarm. If choose Low\Medium\High\Max means motion detection function ON. When sensitivity higher, then the camera trigger alarm more easily; default area is full screen.
- e. Recording Mode: With 3 options Off/Full Time/Alarm. If choose "Off", camera stop recording; "Full time", camera will record all the time; recommended "Alarm", camera record after trigger motion detection alarm (need motion detection function ON and device with MicroSD/TF card)
- f. Format SDCard: click this button, then format the memory card (need camera with card, otherwise, without this option)
- g. About Device: display camera model, version, vendor, total size and free size of memory card.

3.4.2.2 Event

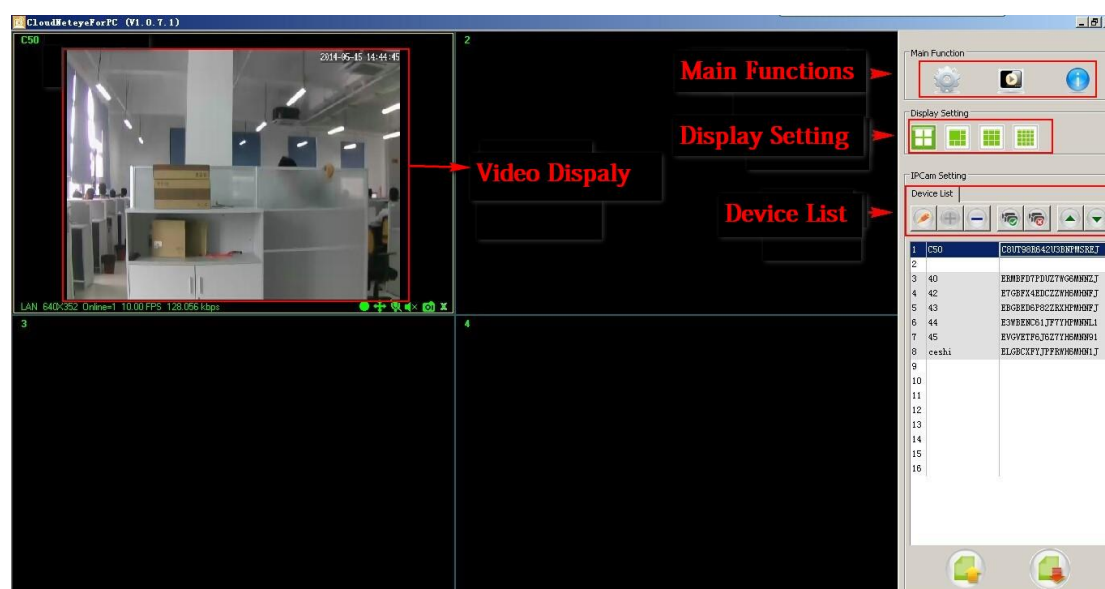

It can view the full time recording or alarm recording of camera.

Chapter 4 PC View and Install

Visit Tenda official website www.tendacn.com, search your model on the top right corner, click and enter the product you found. Click the **Downloads** and get the "PC P2P remote Software", install "CloudNeteyeForPC" after decompressed.

4.1 Software function specification

Below pictures are the screenshot of "CloudNeteyeForPC", we will explain detailed based on the below 4 functions:

4.1.1 Add/Delete IP Camera

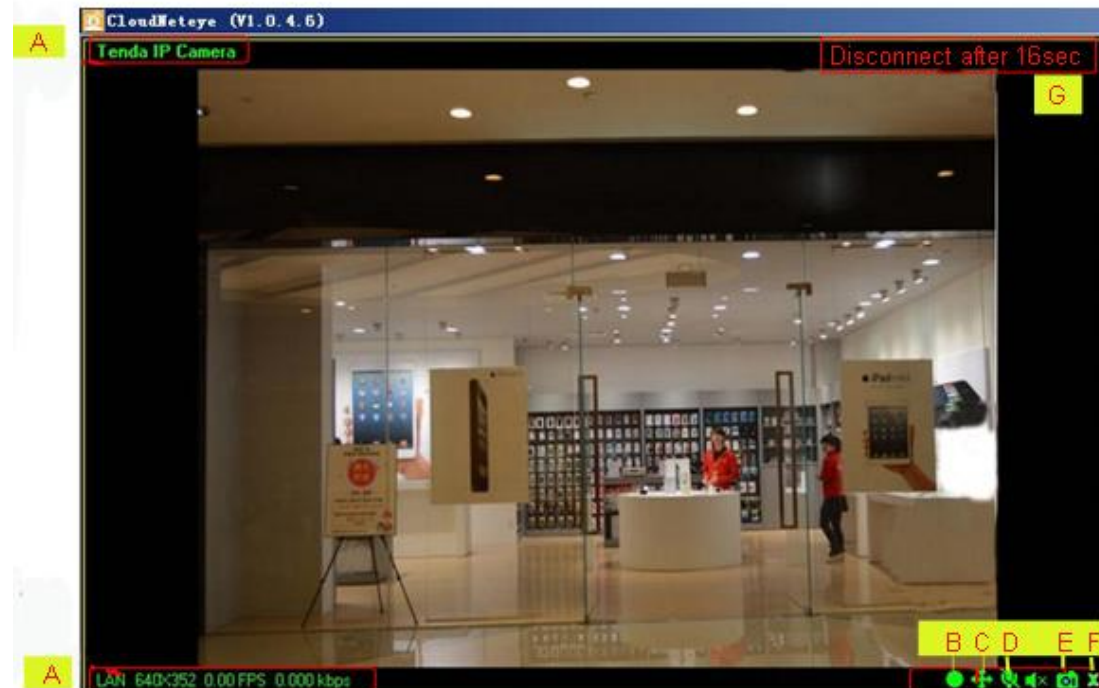

Add/Delete IP camera  can search or manually add IP camera, can support max 16 cameras view at the same time. (When the button is in blue color, then you can add or delete).

Click the blank of camera list, then click button , click and search the connected camera in the popup menu, double click the camera you found, the UID bar that is the UID bar of the camera. Input the camera name you set (Letter and number), then input the default password "admin" or modify the password and click save to finish adding camera. Then you can see the camera in the camera list. You can also input the camera name, UID bar and password and click save, but you need to ensure the camera and computer in the same LAN.

Select the camera in the camera list, click delete camera button, then delete camera.

4.1.2 Video display

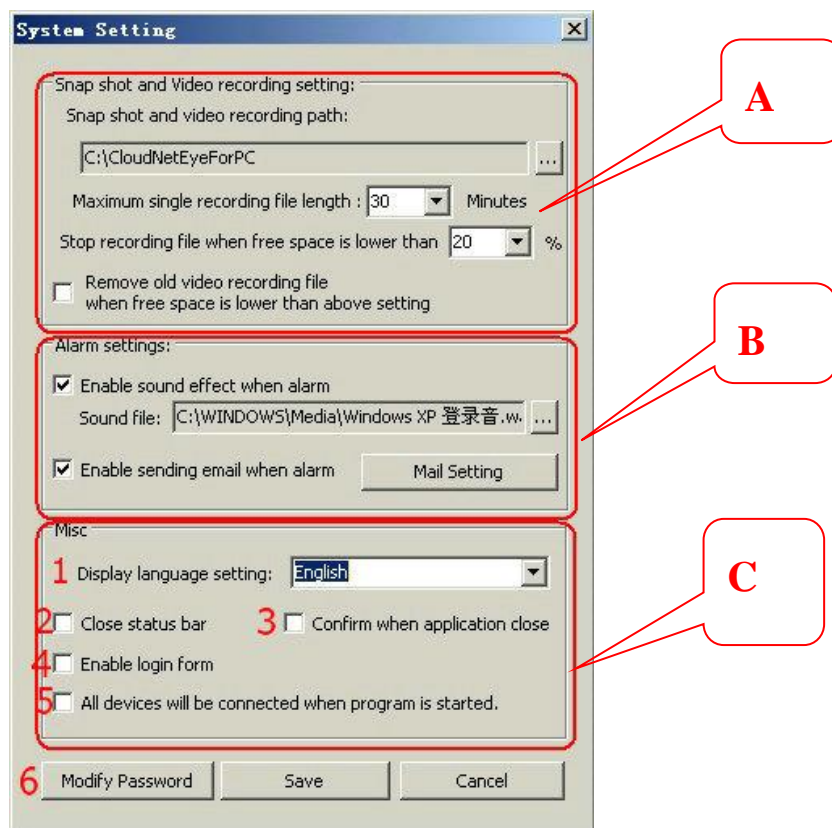

- A. Show IP cam info, include name, connection way (LAN、P2P、RLY), resolutions and FPS.
- B. Record manually. Click this button, when it shows in red, recording start; click again, recording stop. This function is available when full time or schedule recording closed.
- C. Control the IP Cam rotation manually. (C5s do not support this function).
- D. Two-way audio function, include listen and speak (Need additional audio to support speak function).
- E. Snapshot function.
- F. Disconnect IP Cam function by manual.
- G. When IP Cam connect as Relay, connection will close automatically after 1 minute. Users need re-connect the camera manually. When disconnect, recording and alarm function is not available.

4.1.3 Main Functions

4.1.3.1 System setting

Click the setting button on the top right corner “CloudNeteyeForPC” and enter the system setting, as shown in the following photo:

A: Snap shot and video recording path setting.

Users click “...” to choose the disk and file in your computer to save snapshot and video recording.

Users can set the length of single recording.

Users can set the camera stop recording when how many free space left in your disk.

Users can set to remove old video recording file when the free space is lower than setting.

B: Alarm settings

This function is available in condition of motion detection. When users closed motion detection in smartphone APP setting, camera can’t alarm triggered.

Alarm can set as following:

- 1) Event recording, please see 5.4 for reference.
- 2) Alarm sound effect, users can set the sound all wav format file in your computer.

3) Send email when alarm, users can set their email address through Mail Setting.

Note 1: The following form is the parameter configuration of different email server:

Email server	SMTP host	SMTP host port
Yahoo	smtp.mail.yahoo.com	25
Sohu	smtp.sohu.com	25
Gmail	smtp.gmail.com	465
Tom	smtp.tom.com	25

After fill the information, please click “Test”, choose “Allow” in appear tips, and click “Save” to finish all email setting.

Please see below picture for reference:

Can edit the email content

C: Misc setting

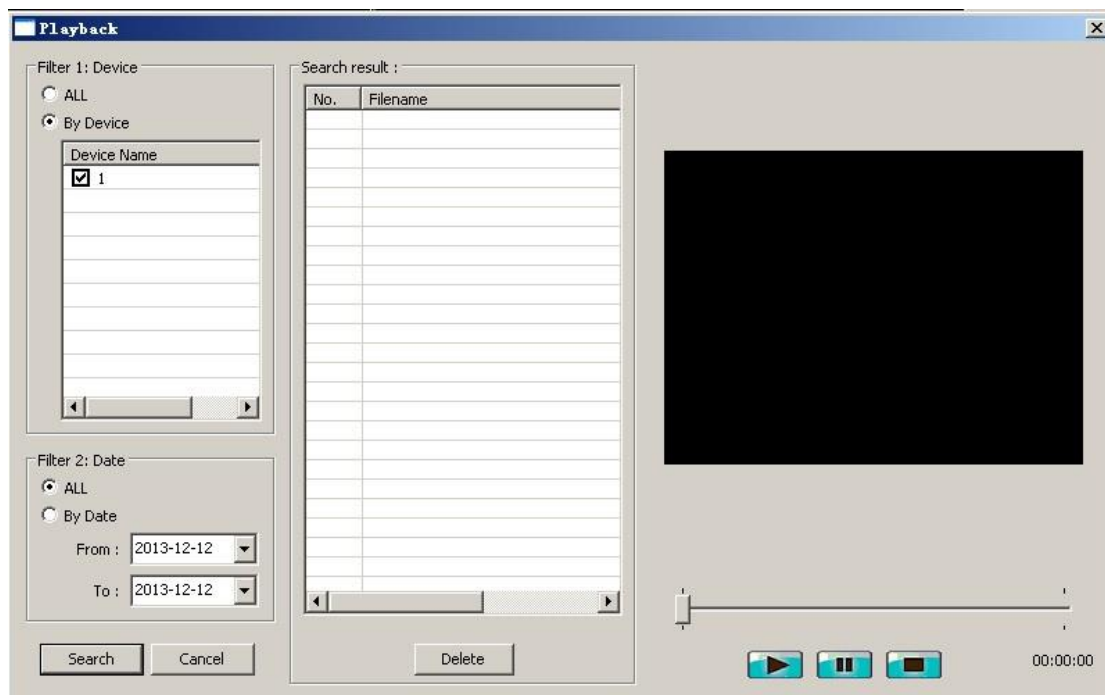

1) Set display language

- 2) Set if close the status bar
- 3) Confirm when application close
- 4) Can choose if enable the login form
- 5) Set all device will be connected when program is started.
- 6) You can modify the password of the camera here.

4.1.3.2 Playback, Browse snapshots and Event list

Click the button  on the top right corner of “CloudNeteyeForPC”. Do the following operations.

1) Playback

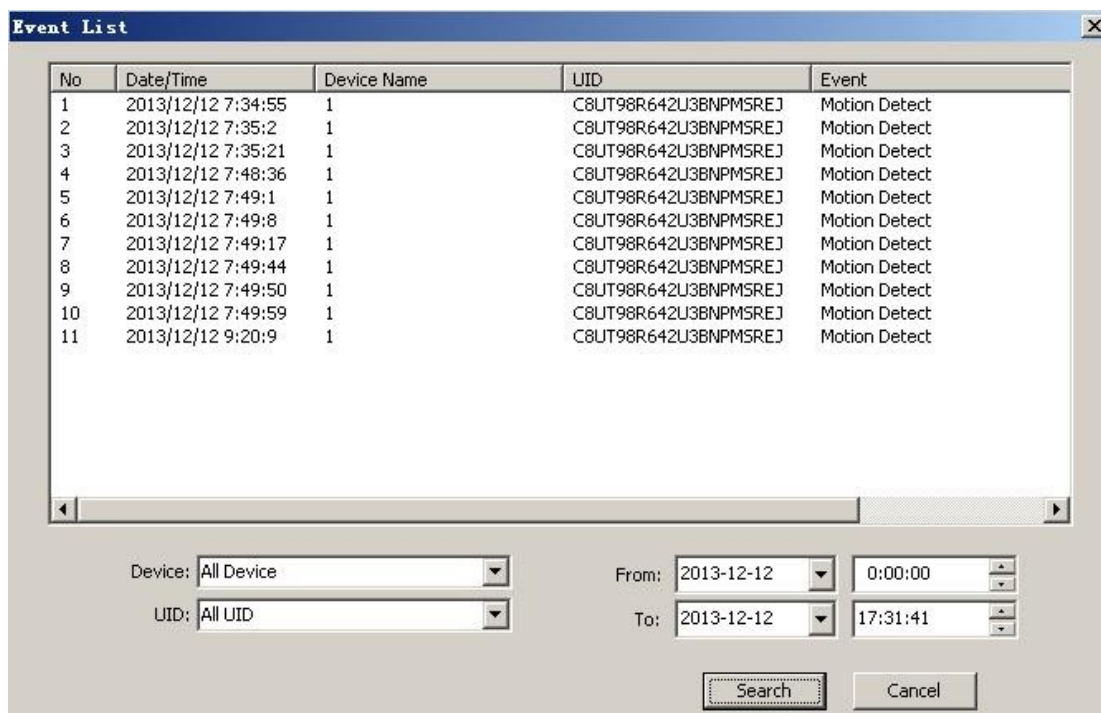

Search function, users can search all recording files of one or more camera in a certain time.

Delete function, can delete unnecessary files.

Users can view the playback of the recording, include play, pause, stop, drag watch and full screen view.

Snapshot function, check snapshot pictures.

Event list

Search function, users can search all even list of one or more camera in a certain time.

4.1.3.3 Software

Click the button  on the top right corner of “CloudNeteyeForPC”, you can get the version information of software.

4.1.4 Windows switching area

Display split, include 4, 6, 9, 16 split pane, double click to full screen view. When several camera work together, you can select the suitable window to view, double click the camera can view in full screen. You can also select  to move the camera and the frame of camera.

4.1.5 Device setting

4.1.5.1 Edit Camera

Choose some one IP camera in device list, click “”, can do “Schedule Recording”, “Remote Setting” and “Remote Device Info”

Device Name: 1

4.1.5.1.3 Remote device information: check the camera info

4.1.5.2 Play/Stop all camera

“Play/Stop” all camera connected button, can support max 16 camera connect or stop at the same time.

4.1.5.3 Export/Import device

Click export or import the button, camera’s data will be import or export in form of text.

Chapter 5 Web View and Setting

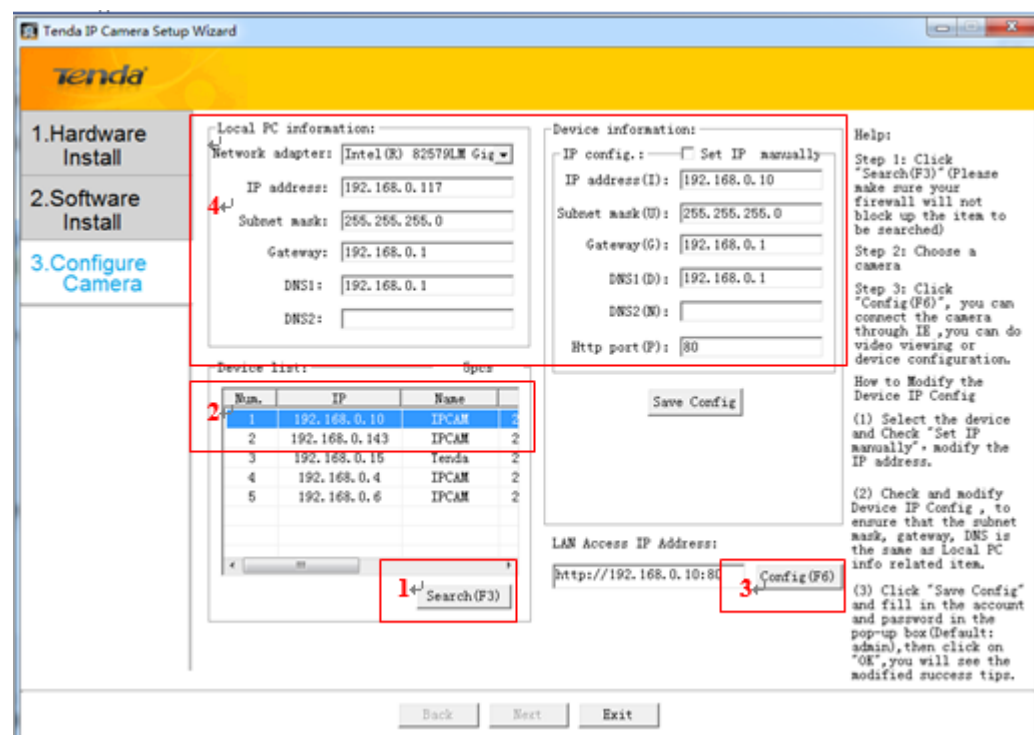

5.1 How to login Web

You can log in the Web through the following two ways:

Way 1: Run “C5s Setup Wizard” to enter Web.

Visit Tenda official website www.tendacn.com, search your model on the top right corner, click and enter the product you found. Click the **Downloads** and get the "Setup Wizard" and "User Manual".

Double click “C5s Setup.exe”, run this software, click “next” according guide info, until to following page.

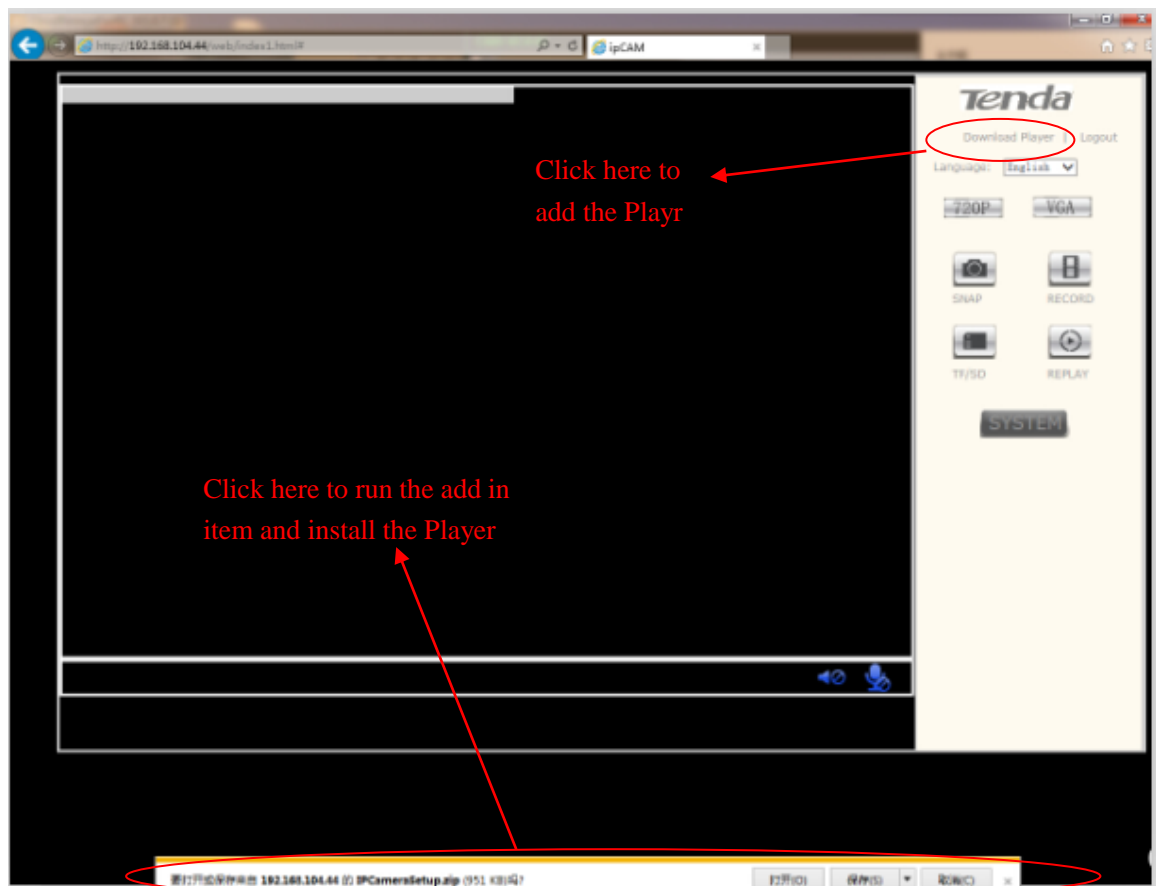

1. As shown on the picture, click “**Search(F3)**”, (please close the firewall and antivirus software in your computer and make the DHCP server is ON in your Router); select camera in “Device list”.

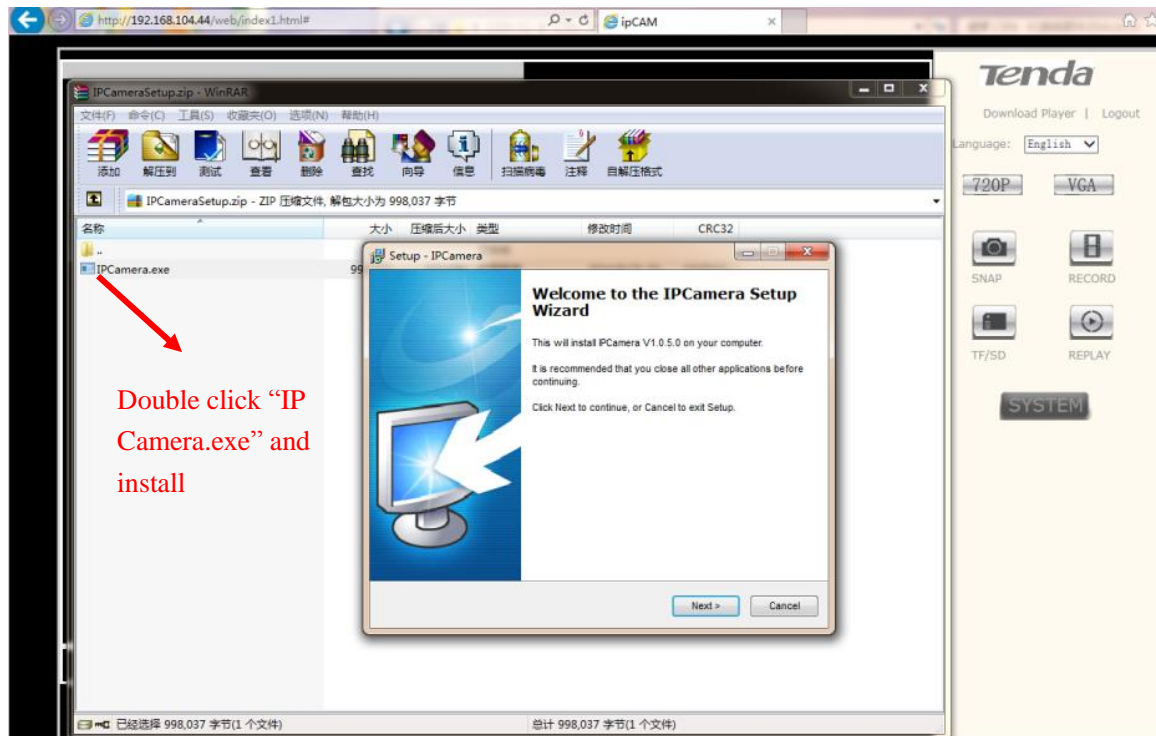

2. Select the camera from the “device list”.

3. Click “**Config(F6)**”, input “admin” in both user name and password on the appearing login window, and then click “LOGIN” to enter the Web UI. You will then be able to watch videos or do system setting. If you need to modify the IP address, please refer to the help item on the right “How to Modify the Device IP config”.

The first time user enter into the UI, it will remind user to download player, click add in item which under the address bar or “download player” and then install. As shown in the following photo:

Open the loaded the folder and then double-click IPCamera.exe, select the installation path and install video control.

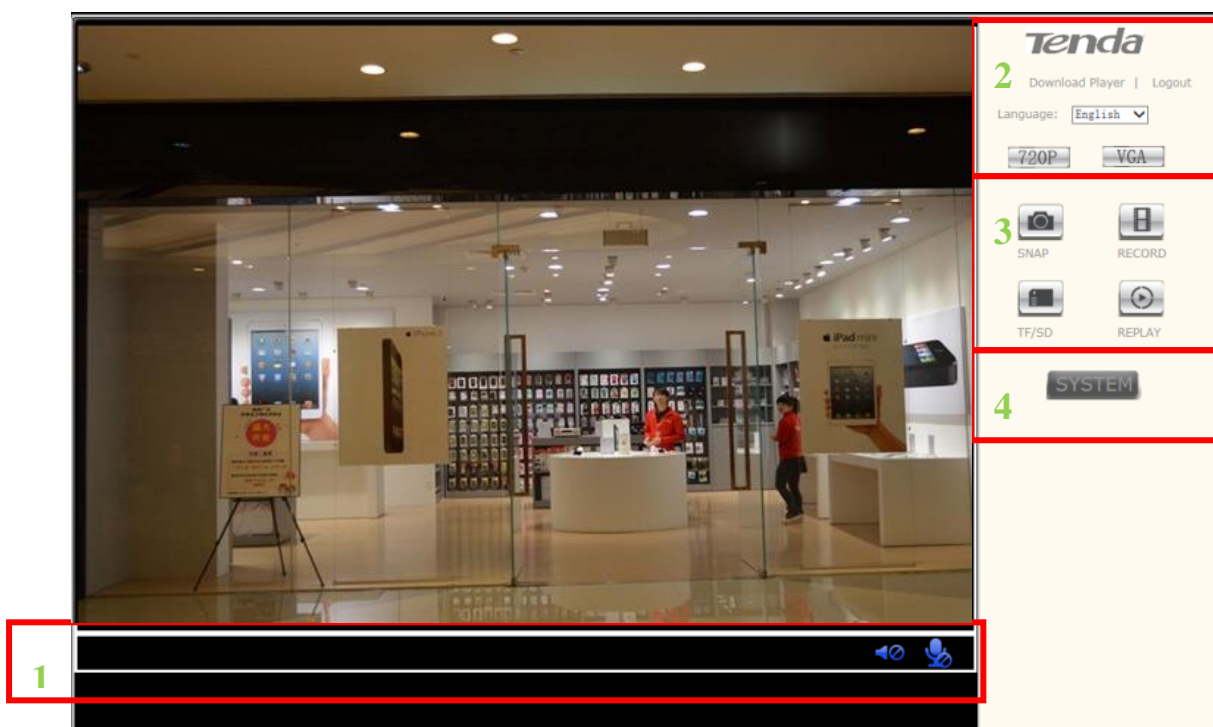

User also can click and install the download play on top right corner web UI as below:

Way 2: Use “CloudNeteye” APPs in smartphone, search camera and find IP address, then input the IP address in browser to enter the Web. Please refer to User Manual “3.2 Add IP Camera” section, use search IP camera function. In the device list info “192.168.X.X” means the camera’s IP address. Open a browser in your computer, input the IP address and press “Enter”, input “admin” in both user name and password on the appearing login window, and then click “LOGIN” to enter the Web.

5.2. Web Set

5.2.1 View video

C. Control the IP Cam rotation manually.

1) Status bar

- a. **Monitor function button** : Click the button, turn it like this , you can hear the voice from camera, click it again , it close and you can not hear the voice.
- b. **Communication button** : Click the button, turn it like this , the voice will be sent to the camera, click it again , it close and the voice can not be sent to camera.
(Note: The speak function need additonal audio to support)

2) Multi-language mode selection

You can select simplified Chinese/Chinese Traditional/English/multi-language. You can select 720P (Image quality is best), VGA (Image quality is good) to view video, for example, using 720P under local area network, using VGA when the video is not smooth

3) Snap/ record/TF/SD card/ replay

Click” snap”, it will have a small window to show the photo snapped, click save to save the photo.

Click” record”, start record. Click again the “record”, and then stop recording. You can chose where you want to save the record.

Click “TF/SD”, the contents of TF/SD card will be shown in the pop-up page (if have install TF/SD card. You can select the contents in the card and download.

Click reply, it will pop-up a media player which can play video.

- ① The device supports max 32G MicroSD card. Please format the MicroSD card to FAT32 before use the card on camera. Please check if the TF/SD Card matches the camera or not before purchasing the TF/SD Card.

- ② Please insert the TF/SD card when the device power off, otherwise it will damage the TF/SD card or the device can't read the card.

- 4) Click “SYSTEM”, enter device configuration UI, you can configure your camera.

5.2.2 Running

Device Info	
Camera Name:	IPCAM
Serial Number:	QVuYNfzJDQajNbeNWbicmivDMcilfuTS
Hard Ver:	C5S
Software Ver:	V3.72.21.3969-X10-Build:20141010R
Network Info	
Connection:	LAN
Mac:	c0:7a:49:78:85:6d
IP:	192.168.104.44
Subnet Mask:	255.255.255.0
Gateway:	192.168.104.1
Primary DNS:	172.16.100.205
Second DNS:	120.196.165.24

You can check some information of the device, such as software version, web version, Mac address, TF/SD card status.

5.2.3 Video Set

5.2.3.1 Video parameter

Main Stream	
Resolution:	1280x720
Bit Rate:	3072
Maximum Frame:	25
Bit Rate Type:	VBR
I Frame Gop:	25
Audio:	<input checked="" type="radio"/> On <input type="radio"/> Off

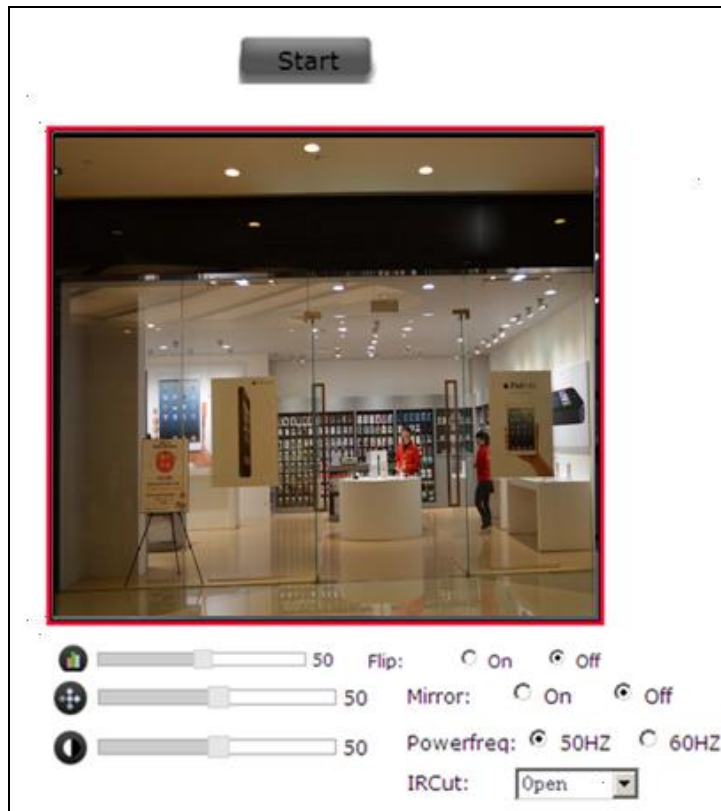

The higher the value of bit rate, the clearer the image, but the occupy band width is also will be higher.

The higher the value of frame, the smoother the image it is.

Sub Stream	
Resolution:	640x360
Bit Rate:	512
Maximum frame:	20
Bit Rate Type:	VBR
I Frame Gop:	20
Audio:	<input checked="" type="radio"/> On <input type="radio"/> Off

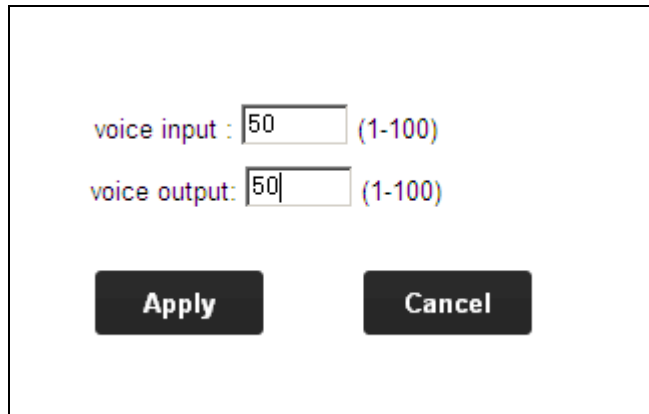

Mobile Stream:	
Resolution:	320x180
Quality:	Normal

5.2.3.2 Video attribute

- 1) Click , and then click    to adjust the ightness, color and so on, so that can change the image quality.
- 2) Flip vertical and flip horizontal can adjust the video picture to up, down, left and right. This can be use when device is installed in ceiling.
- 3) Frequency setting that is video lighting electric frequency rate adjustment, if the picture has corrugation, it can be adjusted another frequency to remove the corrugation
- 4) When IR LED control is" auto", and the external light is dark to some degree, the image is black and white, if it shows the black and white status, but it is not night, you can close infrared, then it can be normal. If the IR LED is closed at night or do not have light, the camera is blind

5.2.3.3 Voice set

voice input : (1-100)

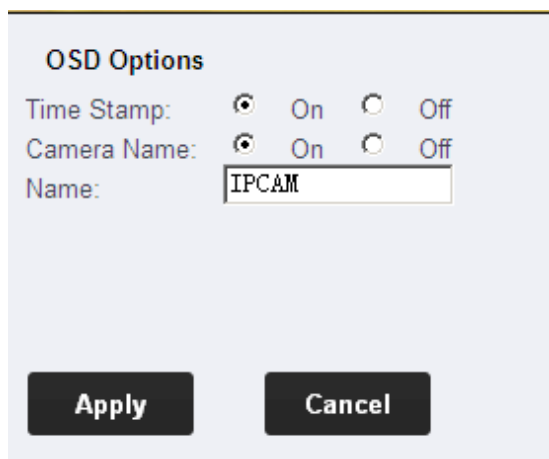

voice output: (1-100)

Apply **Cancel**

It can adjust the voice of monitor and communication, the bigger the value, the bigger the voice.

Please click **Apply** after modified parameter.

5.2.3.4 OSD

OSD Options

Time Stamp: ☒ On ☐ Off

Camera Name: ☒ On ☐ Off

Name:

Apply **Cancel**

It can change the name of camera while chose to turn on or turn off the video time and name.

Please click **Apply** after modified parameter.

5.2.4 Network Set

5.2.4.1 Network Parameter

There are both two way to obtain IP address and DNS setting. One is the fixed IP address, one is dynamic IP address configuration. The camera defaults to obtain IP Address Automatically". User can chose dynamic IP address and DHCP service, then the Router which connect with your camera will assign an IP address to your camera automatically, setting the interface configuration

as default. Input the website in wan test bar for testing, such as input www.tendacn.com.cn, click it. If it works, then your camera connecting is success.

LAN Settings	
IP Type:	Dynamic IP Address <input type="button" value="Reboot!"/>
DNS Type:	Manual DNS <input type="button" value="Test"/>
Primary DNS:	192.168.0.1
Second DNS:	
Port:	
HTTP Port :	80 (80 or 81 or 1024~32767)
ONVIF Port :	1018 (1018 or 1024~32767)
RTSP Port:	554 (554 or 1024~32767)
Network Test:	
Wan Test:	www.google.com.uk <input type="button" value="Test"/>

If the Router do not connect to the internet, the camera also can connect with computer via Router (LAN), but it will not success if you do the WAN test.

LAN Settings	
IP Type:	Fixed IP Address <input type="button" value="Set"/>
IP Address:	192.168.0.4
Subnet Mask:	255.255.255.0
Gateway:	192.168.0.1
DNS Type:	Manual DNS <input type="button" value="Test"/>
Primary DNS:	192.168.0.1
Second DNS:	
Port:	
HTTP Port :	80 (80 or 81 or 1024~32767)
ONVIF Port :	1018 (1018 or 1024~32767)
RTSP Port:	554 (554 or 1024~32767)
Network Test:	
Wan Test:	www.google.com.uk <input type="button" value="Test"/>

If you want to modify the IP address, select the “fixed IP address”, modify the last section of IP address, click the “SET”. The following picture is only for reference, please modify the IP address according to your network environment.

The default HTTP port is 80, if you do not modify the port, you can directly enter the camera IP in the web address field; if you change the port, you need to add ":" and port number behind the IP address. For example: If you modify the port is 8081, the camera IP address is 192.168.0.10. You must enter 192.168.0.10:8081 to access camera.

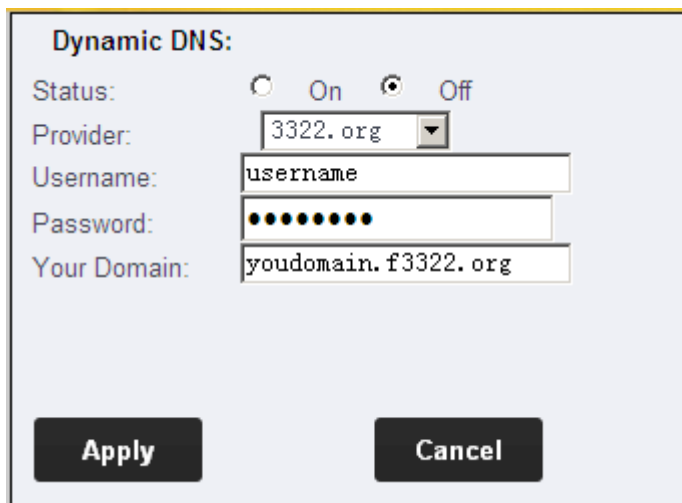

Camera support RTSP, if enable RTSP for verifying, you need to input the user name and password when use RTSP to call the video.

When you modify the parameters, you need to click **Save** to save your settings.

5.2.4.2 Remote Access Setting (DDNS)

User can use third party DDNS, such as www.dyndns.org, just need to log in to the website to apply for a free domain name, fill in the Settings box, and save the settings. Do the port mapping, then you can remote access your IP camera.

IP camera default to obtain the IP address automatically, if you need to remote access via DDNS, the IP address should be manually to be fixed IP address, or it can't port mapping.

When use third party domain name, if the port number is not 80, you need to add a colon behind the domain name and plus the port number, such as: <http://chen.dyndns.org:8081>.

1. Problem of setting remote access, please refer to Addendum1
2. Please click **Apply** after modified parameter.

5.2.8 System Set

There are 2 levels of user authorization in it.

- ◆ Administrator: “admin” has the highest authority, can do any settings. The factory default password: admin.
 - ◆ Guest: User can view the video, but can’t operate the device. The default password is guest.
- Please change these 2 level passwords when your first use to ensure your safety.

Click **Apply** to save the settings.

5.2.8.1 Time Set

The screenshot shows a web interface for adjusting the camera's time. It has a title 'Adjust:' and three main settings:

- Date & Time:** A text box containing '2014-09-15 14:29:20'.
- Mode:** A dropdown menu currently showing 'Keep Current'.
- Time Zone:** A dropdown menu showing '(GMT+08:00) Beijing, Chongqing, HongKong, Urumqi'.

At the bottom of the form are two buttons: 'Apply' and 'Cancel'.

First time you use the camera, maybe the time on the picture is incorrect. Because camera need to get current time by Internet. If the camera can connect to Internet, the time of the camera will update automatically in a moment.

User can select the time zone

Click **Save** to save the settings.

5.2.8.2 Initialization

Initialize

Reboot:	<input type="button" value="OK"/>		
Factory Default:	<input type="button" value="OK"/>		
Backup Data:	<input type="button" value="Save"/>		
Restore:	<input type="text"/>	<input type="button" value="Browser..."/>	<input type="button" value="Apply"/>
Upgrade:	<input type="text"/>	<input type="button" value="Browser..."/>	<input type="button" value="Apply"/>

Reboot: When upgrade camera firmware, it will automatic restart camera. "Audio format" will automatic restart camera.

Factory Default: Enable the camera back to factory setting.

Backup Data: If the back set up to date, the camera generate a file that you can save in your computer, and you can directly import the file when needing. Your computer can back to the parameter as you set before. This function is to facilitate the user to manage camera and do not need to set the parameter any more.

Upgrade: Upgrade firmware is to upgrade camera system firmware and web, recovery and restore your saved settings parameters.

System log is to record the user operation and alarm event, it shows the operation and the time of event.

FAQ

1. After I connect the camera according to guide of Setup Wizard, and add camera by smartphone scanning UID QR code, it shows **Unknown device**. Why?

When you run **CloudNeteye** for the first time, make sure your smartphone and camera connect to the same Wi-Fi Router.

(1) Check the camera's power connection is normal or not. Check the camera's LED is on or not, if not bright, then check the camera's power connection.

(2) Check the camera connect to Internet correctly or not.

Camera must connect to the Router's LAN port, and check the Router's LAN port LED is on or not. If no light, replace the Ethernet cable and try again.

The camera is unable to connect to the port of DSL MODEM, Cable MODEM, PON MODEM that cascade to the Router.

(3) If still can't view camera, enter Router configuration page to check if the DHCP function is ON.

Verify that DHCP function is **ON**. Because IP Camera' IP default to obtain from DHCP server.

2. When view with smartphone, camera shows **On Line**, but the picture is black screen, and need wait for a moment, then the image display correctly. Why?

Because the video quality level is setted up too high, and the network is not good enough, so the camera response delayed. Change setting according to the next steps: Click “” or “”

→Click **Edit Camera** or **Advanced Setting**→ **Video Quality**, reduce a level (quality levels are Max/High/Medium/Low/Min).

3. Run **CloudNeteye APP** on smartphones, why can't search camera?

Before running **CloudNeteye APP**, please according to the quick installation guide instruction, run setup wizard, complete the camera configuration.

Before running CloudNeteye APP, please ensure that your smartphone and the camera is connected to the same Router. Smartphone can via WI-FI to connect to the Router.

4. Why I fail to recording. When click **Record to TF/SD Card**, then click **Apply** to save setting,

But after I refresh the page, the status still “Off”. Reset browser first: Tool→ Internet

Option→Advanced→Reset. Close browser, and enter again. If the problem is still not solved, then because that browser is not compatible with. Change another browser, like IE6, IE8 and so on.

5. Why videos on camera are not true in color?

Cameras with CMOS chips are sensitive to light. Videos may not look good in color with dark light or equipped infrared lens. To avoid this problem, please use CMOS cameras with dual filter or a color lens.

6. Why smartphone viewing image is not clear?

Because the CloudNeteye default value of video quality is low, so the resolution is limited, you can set by yourself. Run CloudNeteye, find the small triangle in device list, touch it enter into **Edit camera >Advanced Settings >Advanced >Video setting>Video Quality** page, change video quality to “Medium”, “High” or “Max”. Note: The video quality is higher, the greater consumption of mobile broadband traffic. To save your smartphone broadband traffic, select the appropriate video quality.

7. Why my camera cannot connect to the existing wireless Router?

Before you connect to the existing wireless router, you must first connect your PC to the camera via an Ethernet cable and then enter WEB UI to configure some basic settings, or use “CloudNeteye” or “CloudNeteyeForPC” to set WiFi.

8. My camera cannot be reset. What should I do?

Press the Reset button for about ten seconds when your camera is connected to power source.

9. Why do I have to reconfigure the camera to wirelessly connect to my wireless Router every time when the Router restarts? Sometimes I cannot even search the wireless network of my Router.

- A. Manually set your wireless Router’s channel to any number between 1 and 11. Do NOT use channel 12 or channel 13.
- B. Make sure your Router’s SSID is a combination of letters and numbers and does not include any special characters, Chinese characters or symbols!
- C. Manually specify your wireless Router’s security settings, say, WPA2-PSK, AES. Do NOT use the Auto option.
- D. After you configured your Router as required above, connect your PC to the camera via an

Ethernet cable.

E. Open camera's web page, search and select the Router's SSID.

F. Enter the Router's security key.

G. First disconnect the Ethernet cable and power supply from the camera and then reconnect the camera to a power source.

H. Restart the camera and the problem will be resolved.

10. Why it is too slow when watched from my phone?

Please watch it via a 3G or WIFI connection. 2G connection may not be good enough for the service. But sometimes the 3G network is not nice either. Try lowering the resolution on your mobile phone if you use a H.264 format camera.

11. Is the camera's wireless connection secured? Can others connect to my camera?

The camera's wireless connection is well secured with WEP/WPA/WPA2 wireless encryptions.

12. What wireless protocols does the camera support?

It supports 802.11b/g/n and wireless transmission rate up to 150Mbps.
